ABSTRACT

In the wake of the COVID-19 pandemic, hospitals have registered a shortage of necessary equipment due to lack of production and unequal distribution of the same. Sahyog provides an online real-time platform to create an optimal supply-on-demand service to bring the hospitals and medical supply chain vendors at one place, thereby eliminating the potential shortage of medical goods and paving way for new players in the medical industry.

Additionally, we believe that the project will aid into increasing awareness on COVID-19 in addition to providing real-time statistics of the same.

INTRODUCTION

In the wake of the COVID-19 pandemic, hospitals have registered a shortage of necessary equipment due to lack of production and unequal distribution of the same. As the COVID-19 pandemic continues to spread, it has exposed vulnerabilities of supply chains and logistics. It has disrupted health supply chains, affecting active pharmaceutical ingredients, shipping, procurements, finished healthcare products and more.

To begin with, there is a shortage of a vital component—N95 masks—that prevents the healthcare staff from catching infections as India faces its worst crisis. There has been an exceptional rise in demand for N95 masks, and suppliers are not able to meet this.

Another critical component of infection control strategy is the use of PPE. According to the WHO definition of PPE, ‘The Protective equipment consists of garments placed to protect the healthcare workers or any other persons to get infected’ They consist of the standard precautions of gloves, mask and gown. If the severity of an infection is more, as in blood or airborne infections, the PPE will include face protection, goggles and mask or face shield, gloves, gown, head cover and rubber boots These crucial elements of healthcare are currently in short supply due to the shortage of a critical machine which is needed to stitch them up. These machine supplies were being imported from China, but as China is itself recovering from COVID-19, it has asked India to wait for another 12 weeks. Given the current resources, India would have to double the daily production of PPE suits to 30,000 from 23 April 2020 from the current capacity of 12,000 units of production. This has made the government ask private companies to reach out to their suppliers in China and scout for machine manufacturers in China and Hong Kong.

As COVID-19 is known to affect the respiratory system, like pneumonia, patients are put on the ventilator, which is a medical device used to assist in breathing. India has around 48,000 functional ventilators, mostly concentrated in the tertiary units of urban areas, whereas the country would need hundredfold more, because there is an alarming rise in cases Therefore, ventilator shortages have threatened to paralyze the healthcare system. India is in a very similar situation as countries like Italy and Spain, where healthcare workers experienced high rates of infections and rise in morbidity and mortality due to inadequate access to PPE. High mortality in COVID-19 patients was attributed to the lower number of ventilators than cases. There are not enough ventilators for patients with COVID-19.

Another major problem is the availability of COVID-19 testing kits. Both swab testing and reverse transcription polymerase chain reaction (RT-PCR) kits are in short supply. As mass

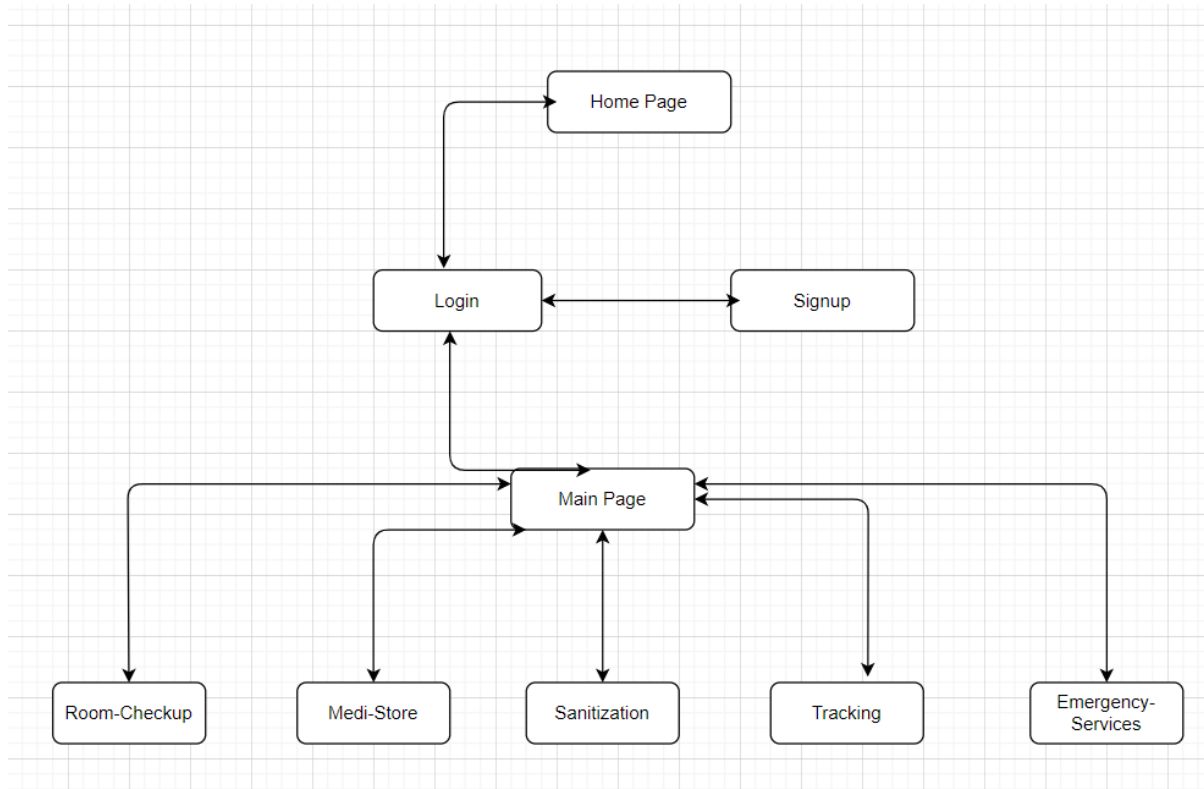

testing is increasingly important to detect COVID-19-positive patients, India has placed orders for importing rapid antibody testing kits from 30 countries. The Indian Council of Medical Research (ICMR) has also given a nod to Indian manufacturers to increase the manufacturing of testing kits. There are a few companies that have started making testing kits in India. Some global pharma companies have also started supplying kits to India. In order to meet the growing demand of medical equipment, Sahyog provides an online real-time platform to create an optimal supply-on-demand service to bring the hospitals and medical supply chain vendors at one place, thereby eliminating the potential shortage of medical goods and paving way for new players in the medical industry.

EXISTING SYSTEM PROBLEMS

In the face of the COVID-19 pandemic, a necessity at hand is the integration of technology and institutions associated with the medical industry.

1. Increasing covid cases
2. Increasing demand for medical equipments
3. Need to empower local population during lockdown
(made in india)
4. Unequal distribution of medical goods

PROPOSED SYSTEM DESIGN

DATABASE DESIGN

The screenshot displays the phpMyAdmin web interface. On the left is a sidebar with a tree view of databases and tables. The 'signup' table is selected under the 'sign-up' database. The main panel shows the table's structure and a single data row.

Database: sign-up
Table: signup

Showing rows 0 - 0 (1 total, Query took 0.0012 seconds.)

```
SELECT * FROM `signup`
```

☐ Show all | Number of rows: 25 | Filter rows: Search this table

+ Options

	First Name	Last Name	Email-Id	Username	Password	Gender	Block	Room-No
<input type="checkbox"/> Edit <input type="checkbox"/> Copy <input type="checkbox"/> Delete	Mohd	Umar	hasanimamul57@gmail.com	hello	1234	Male	A-Block	217

☐ Check all | With selected: ☐ Edit ☐ Copy ☐ Delete ☐ Export

☐ Show all | Number of rows: 25 | Filter rows: Search this table

Query results operations

☐ Print ☐ Copy to clipboard ☐ Export ☐ Display chart ☐ Create view

Bookmark this SQL query

Label: ☐ Let every user access this bookmark

MODULES AND DESCRIPTION

Front-End: The website involves the following flow

Home Page: Involves a brief introduction to the project, link to major pages that do not need any special access, involves a link to login and signup pages.

Login and Signup Pages: Users require to login or create an account in order to access the online market.

Detail filling page: If the user is signing up for the first time, the user must authenticate their information.

Profile Page: A user specific page where all information of the user is maintained.

The market Page: The users will have a separate market page depending upon the type of customer they register – a hospital market place where hospitals can place orders and similarly only the ones registered as vendors can collect orders.

Payment Page: A payment gateway where a list of orders made is kept. It is updated in real-time. All payments are also made using this gateway.

Contact Page: Involves all information required to contact the team in case of a query or problem.

A 404 page: A page where the website will be redirected if a certain URL in the domain is not found.

Back-End: It involves a very simple RDBMS that contains usernames, details, password, payment and order history etc. It also includes a real-time list of orders placed and received. At the moment, passwords serve as the only means to encrypt data. The whole project shall be hosted on a node.js framework.

Module Description

The module creates an online buying-selling platform. We have named the project ‘Sahyog’ – which means co-operation or help. It involves two modules at the moment –

module1: A Database for login and details. The second module involves a single page where orders are grouped on type of service/commodity needed. For example, there would be a grouped list of orders for PPE kits, a grouped list of orders for ventilators and so forth. A vendor can, depending on how much it can supply, receive orders. Once an order is received, it is invalidated on the website. Only the vendor has that order and a dead-line to supply it.

Note: An additional business proposal is to impose a fine on the vendor if it is unable to deliver the supplies on time.

Software Requirements: It needs a browser to support HTML, CSS, JS and JQuery on a nodejs framework. So, nodejs or npm with a modern browser that supports most of HTML5 tags would suffice to run the project. We have tried to keep the project as widely accessible to

specially-abled people as well. However, they are not an initial target group.

Additional Modules that we believe can be added: This project might have the potential to serve as a socialising or networking platform for not only medical institutions and suppliers but also for patients who can form support groups in both psychological and financial sense. The modules available in the website are sufficient to support such an endeavour. However, a user specific UI will have to be developed in that case.

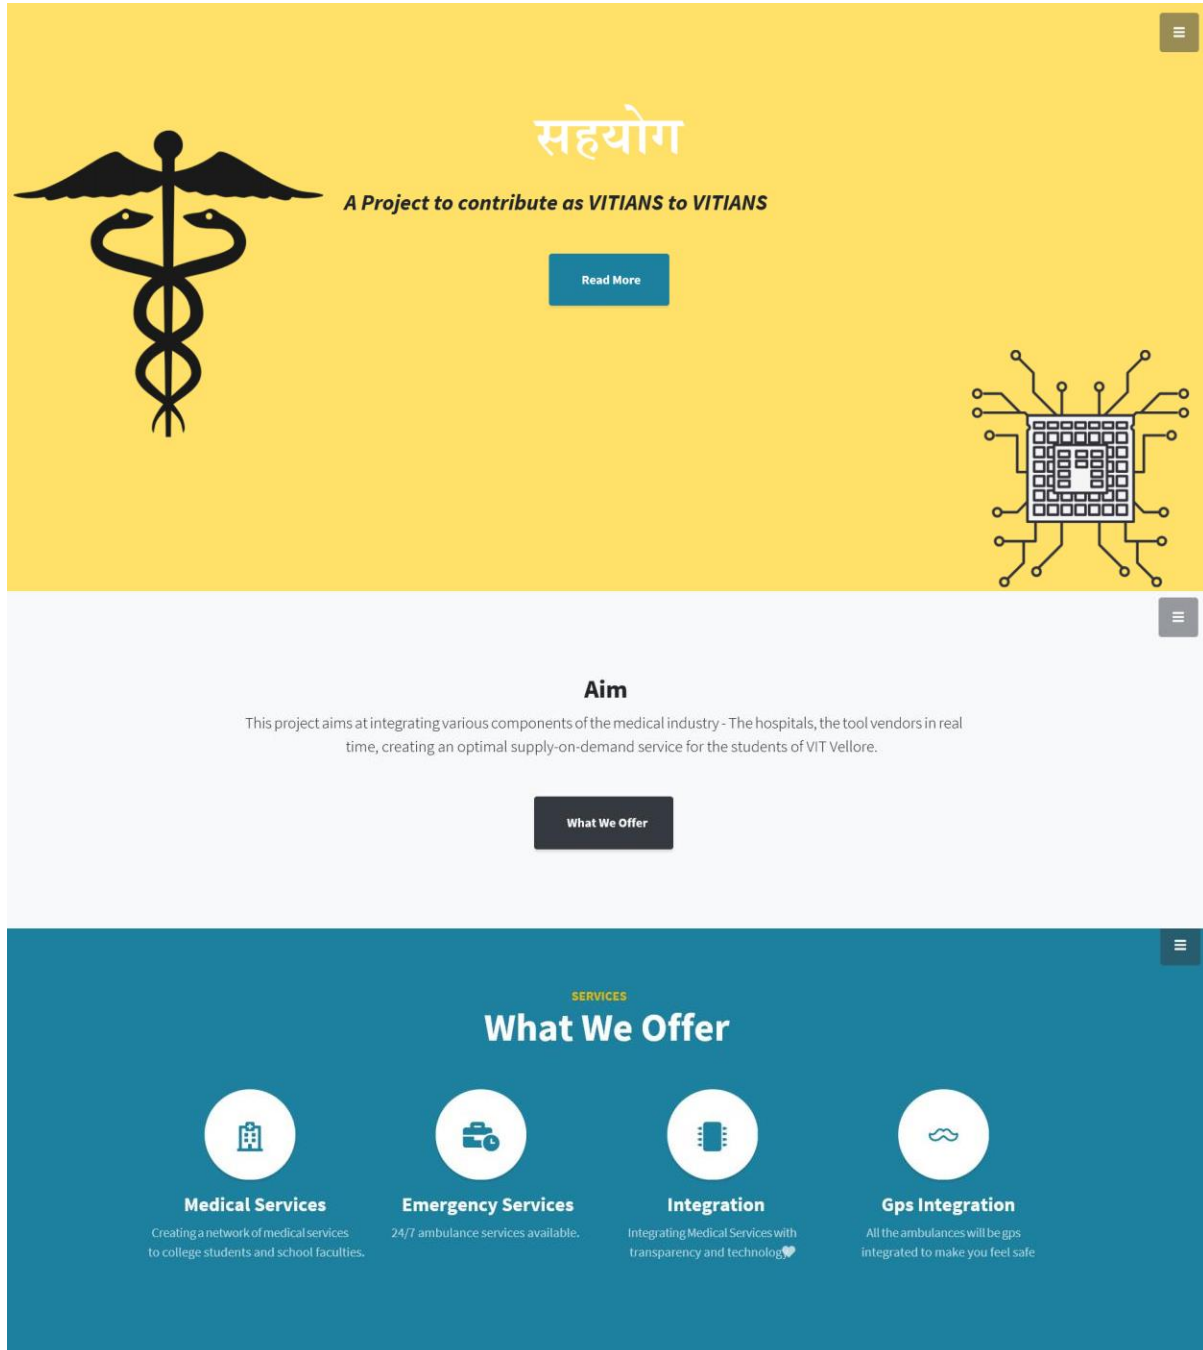

New Developments

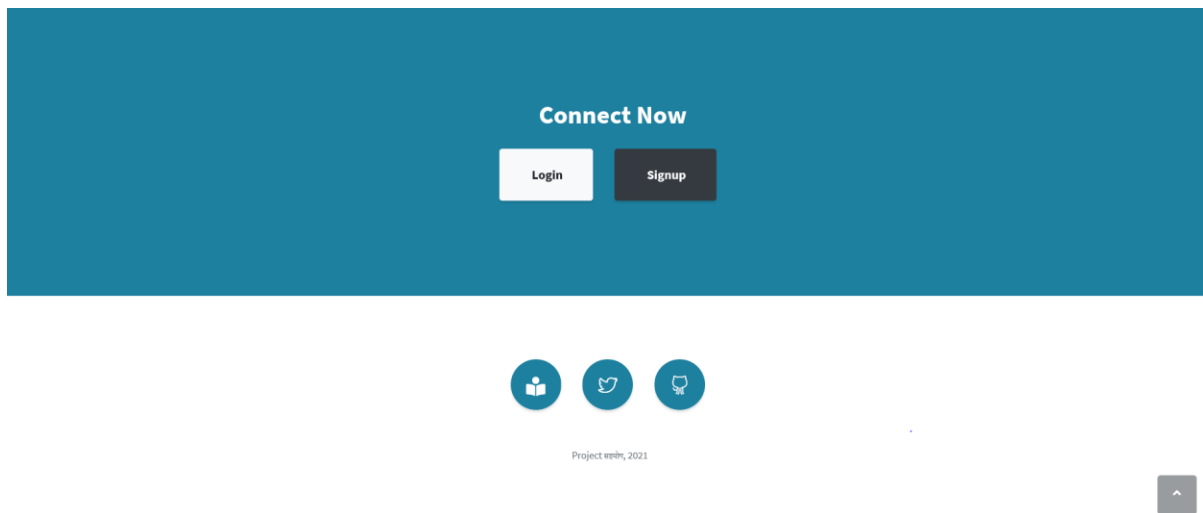

Until now, the hospitals used to contact the medical vendors manually or through numerous individual portals. With the help of Sahyog, an optimal supply-on-demand service will be facilitated on a single platform for all the vendors and the hospital network. This will lead to transparent transactions and the best deals.

OTP Generation: We have used the Web Dispatch API.

CONCLUSION

The project creates an optimal supply on demand service for the students of VIT Vellore. And we have created this project in the view of CSE3002 Project for Winter Semester 2020– '21.
